Find out why micronutrients, botanicals & more are beneficial for physical performance and weight management

Botanicals to support stress reduction and relaxation

Stress describes the physiological reaction to environmental threats or pressures like excessive workload. It manifests in ways that are measurable: Change in mood, memory, concentration and problem-solving. Consumers are increasingly looking for relaxation functions and stress reduction in products. Botanicals are among the major ingredients that consumers associate with relaxation.

Functional ingredients for your products that reduce stress, increase stress resistance and support relaxation*
